

# AddShoppers Social Shopper Login

## Magento Installation Instructions

**1.** Open up the included **block.txt** file and set the **mydomain** variable to your domain. Then, create a static block in Magento (in admin go to CMS > Static Blocks > Create New) and paste the contents of this file. Name it **social\_login**.

Note: The Facebook login button is included by default in the included code. We included the code for our LinkedIn, Google, and Paypal login buttons in a comment at the end. If you want them, just move the code out of the comment.

**2.** Call the static block on the page you wish to show the Social Shopper Login button(s):

(\* for the examples below these are the usual locations of the login form for Magento)

Magento 1.7 (if persistent cart is on)

**app/design/frontend/default/YOURTHEMENAME/template/persistent/customer/form/login.phtml**

Magento <= 1.7 (without persistent cart)

**app/design/frontend/default/YOURTHEMENAME/template/customer/form/login.phtml**

**Not sure how to call this block?** Copy and paste the code from the included **call-block.txt** file where you want the button to show up.

**3.** Paste the included **create.php** file into the main Magento directory (the same directory that has the app/ skin/ js/ index.phtml etc).

**4.** Open the **create.php** file and replace **YOUR\_SECRET\_KEY\_HERE** with your AddShoppers API Secret Key (from <https://www.addshoppers.com/merchants> > Settings > API).

```
$AddShoppersSecretKey = "YOUR_SECRET_KEY_HERE";
```
